

*When the elevator moves  
at constant velocity (or is  
stationary)...*  
*...your weight is normal.*

*When the elevator  
accelerates upward...*  
*...you are heavier.*

*When the elevator  
accelerates downward...*  
*...you are lighter.*

*If the cable breaks so that  
you are in **free-fall**...*  
*...you are weightless.*
